A NEW JOURNEY HAS BEGUN TO ENHANCE REFUGEE LIVES AND TRANSFORM CAMPS INTO GREEN VILLAGES

"In late 2023, Sanaubar (pine tree) Project was launched, dedicated to improving the lives of refugees and transforming camps into green villages. The initiative aims to create positive change and sustainable communities for those in need. Sanaubar Project is an environmental and social initiative aimed to improve living conditions in refugee camps and revitalizing them into green villages capable of facing climate change-induced natural disasters. It utilizes Local Microclimate techniques to manage and regulate the climate in specific areas with defined objectives. The Sanaubar Project seeks to create a safe environment for refugees, providing them with necessary knowledge about climate change and local climate techniques to protect them from climate change-related natural disasters. It also focuses on empowering refugees with skills needed to initiate the camp's transformation into a self-sufficient green village, addressing food and water security challenges threatening their future.

THE NEXT PILOT PROJECT FOR SANAUBAR

sanaubar's next pilot project is to build a sustainable environment in one of the biggest schools in Al-Baqaa camp for Palestinian refugee in Jordan. This project will aim to empower students with the necessary knowledge about climate change, natural disasters resulting from it, risk management and water management. These awareness sessions will be two days a week for a consecutive month, and these sessions will be followed by practical phases of everything the students learned during these sessions about climate change and how it can be addressed. By building a sustainable environment, the students will begin to participate in planting the school garden with various trees and plants that will give an aesthetic and picturesque green color to their school, which will give them the opportunity to sit under the shade of the trees to study and relax in their free time. They will also be able to eat from the tree that they planted themselves. They bear full responsibilities. These sessions and the practical phase that follows them will represent a qualitative change in the students' concept of climate change and its risks. They will become ambassadors among their families, friends and peers about climate change and how we can work to reduce the aggravation of its effects.

THE JORDANIAN PROJECT SANAUBAR PARTICIPATES IN SPREAD THE SPICES FESTIVAL

SPREAD THE SPICE, is a 3-day festival that showcases ideas for social change and innovative solutions for a brighter future. The event is organized and hosted by kanathari 2023 participants in Kerala-India. For the first time in the history of this event, a Jordanian project participated in it. The visitors to this event get to know about Jordan, it's Royal family, it's culture, heritage, and Jordanian popular foods, and about the Sanaubar project, and its goals. The visitors expressed their admiration for Jordanian culture and for Sanaubar's programs and projects.

SANAUBAR PROJECT AND OTHER PROJECTS VISIT THE COLLEGE OF AGRICULTURAL IN KERALA

Sanaubar Project and several other initiatives from various countries visited the Agricultural College in the Indian state of Kerala. Through this visit, they explored various agricultural techniques, different plant varieties, and agricultural production methods. The college director expressed his delight in welcoming visitors from different countries, providing them with a comprehensive curriculum containing all the information relevant to projects operating in the agricultural and food security sector.
